**Boingo Wireless Reduces Update
Cycle Time from Months to Days
with Opkey's Managed Oracle
Cloud Certification Solution**

Customer Overview & Need

Boingo Wireless is the largest WiFi provider in US airports and has over 1,000 employees. The company is an Oracle Cloud customer using Oracle's Financials and Project Finances modules. Boingo's Oracle applications had over 40 integrations with outside applications and technologies, making their Oracle environment quite complex.

Boingo faced many issues performing regression testing and ensuring business continuity. With each quarterly update, business and technical teams had to spend a full two weeks to test their 250 business processes. Additionally, modifying existing test cases during update cycles was nearly impossible.

Business Challenges & Solution

Challenges

- Quarterly testing required way too much time and effort from both business and technical teams. Boingo wasn't sure what they should be testing, and ended up testing far more than they needed to with each update.
- Boingo employees dreaded quarterly updates, and productivity and morale were negatively impacted.

Solution

- Boingo decided to use Opkey's Managed Oracle Cloud Certification solution to relieve internal teams from the burden of quarterly testing.

Results

- Opkey got Boingo Wireless onboarded in just three weeks, and were able to automate testing for their 250 business processes in just one month.
- Quarterly updates are now certified in three days, rather than two and a half weeks.
- Boingo achieved an 80% ROI in just 4 months.

Testimonial

We quickly realized that manually testing our Oracle Finance Cloud with weekly patches and quarterly updates was not going to be scalable. Integrating with Opkey was painless. With minimum inputs from our side, they retrofitted their test cases and made us certification ready fast.
