The Wonderful Company (TWC) Streamlines Oracle Cloud Update & Regression Testing with Opkey

TWC reduced testing efforts by 90% while achieving 98% test coverage

the Wonderful company™

About The Wonderful Company

The Wonderful Company is a privately held \$5 billion company, headquartered in Los Angeles, California. Founded in 1979, TWC employs over 9,000 people. Its extensive portfolio of brands includes FIJI Water, POM Wonderful, and Wonderful Pistachios.

What challenges was TWC facing?

- TWC uses the Finance and Supply Chain Management (SCM) modules in Oracle Cloud. Their Oracle environment has 300-400 integrations with outside applications, making it quite complex.
- TWC was manually testing their Oracle Cloud updates before partnering with Opkey. They found that manual methods were draining staff resources and limiting their ability to take full advantage of new updates and features. Bottlenecks were especially harmful to the business during Oracle updates, as TWC needed to regression test 1,100 different business processes and scenarios.

How did Opkey help?

- Opkey automated TWC's Oracle Cloud patch update cycles, majorly reducing their testing efforts and ensuring a risk-free patch update experience.

- Opkey empowered TWC to take advantage of new features faster and with the assurance that their digital ecosystem was secure.

With each update, Opkey...

- ✓ Provides TWC an easy-to-validate report on impacted modules.
- ✓ Automatically provides test data provisioning.
- ✓ Delivers a detailed audit trail.

What were the results?

Opkey empowered TWC to test their Oracle updates in just 3 days, compared to 2 weeks before Opkey.

This freed up major bandwidth from their IT teams, and allowed them to release changes 15X faster. This, in turn, allowed TWC to take advantage of new Oracle features as soon as they came out.

Overall, efforts for testing each Oracle quarterly patch update were reduced by 90%.

And TWC's IT team can now focus on more value-adding activities.

Benefits:

- ✓ TWC reduced their defect leakage by 90% and reduced the risk of downtime
- ✓ The company increased test coverage by 50%
- ✓ Opkey allowed them to generate ideal test cases across business processes

“ Opkey came along at a key time for our organization and completely revolutionized our Oracle Cloud testing. I can’t imagine going back after seeing what test automation has done for us.”

Ravi Balakrishnan

Director, Enterprise Applications, TWC

You've never seen test
automation like this before.
